VoxSciences Launches the UK's First Free Voicemail-to-Text App
The UK's first free Voicemail-to-Text iPhone application available for download

London, UK: For the first time, smartphone users across the UK can now download a free Voicemail-to-Text App for their iPhones: Voxsciences (www.voxsci.com) is today launching its Voicemail-to-Text, VoxSci app for iPhone, providing a free and innovative way of accessing and managing voicemails.

"Have you ever been really frustrated with your normal mobile voicemail offering but never realised there was an alternative? Well, VoxSciences now allows UK Smartphone users a way to get more from both their voicemail; it has all the features you would expect from a voicemail service plus free Voice-to-Text transcription which is a first in the UK" said Ken Blackman, co-founder and CEO, Voxsciences.

How does Voxsci work?
VoxSci is a free iPhone application, which allows users to read and therefore, search, their voicemails. VoxSci is available to download from the App Store now. The service is activated during the registration process, which only takes a minute, replacing the user's normal mobile operator voicemail. From this point, VoxSci will answer all incoming calls if the user is not available to answer their phone.

Once a message is left, VoxSci then automatically pushes the audio message and text transcription directly to the mobile App and to the user's registered email address should they wish. This means the voice message can be read or played within the mobile App, via email as text or via an mp3 attachment.

Added Ken Blackman, "Its great to be launching this popular service for free and I encourage Smartphone users to visit their App store today and download VoxSci. Here at VoxSciences we have a great pedigree of providing Voice-to-Text services to businesses and we are now pleased to have launched our services directly to end-users "

VoxSci is simple to install and works with a user's existing mobile phone number and operator, meaning there is no requirement to change numbers.

About Voxscienes

Formed in 2008, VoxSciences is a voice recognition technology solutions company offering Voice-to-Text services to both B2B and B2C audiences. VoxSciences is continually developing a portfolio of solutions that utilise voice recognition technology, providing users with convenient unified communications management services.

VoxSciences combine extensive industry expertise with successful B2B technology deployments to offer a quick and easy way to manage voice communications. VoxSciences technology is continually developed to meet the increasing consumer demand for mobile efficiency.

Ken Blackman and Tushar Joshi founded the organisation following the successful sale of Puma Unified Communications Ltd. to J2, a NASDAQ listed company, based in Hollywood.
